Gicana, Exequiel John R.   Object Oriented Programming
DCET 2-1.   Mr. Frank Anthony Chin

Instructions on how to use and install the program.

I chose the Bookshop Inventory System as my program. In order to use it, here's the brief explanation about it; first, you will see the homepage, there, you can see choices. There are five (5) choices in this program. The first one is to add books and the second is to show all books. If you want to search about certain books, you need to press number three (3). If you want to see the update on the books, you need to press the number four (4). And lastly, if you want to see the deleted books, you need to press the number five (5). Press the number six (6) if you want to exit the program.
